

ASIGNIO

Secure 2FA

Asignio is an innovative biometric built directly on top of the SMS that is already understood and widely accepted by the average user.

SIMPLE: Replace 6-digit codes with a web link to use a biometric signature; same process the user already knows with an additional biometric layer for security.

PERSONALIZED: Biometric signature powered by handwriting recognition. Just a few letters drawn on screen, and confirmed by passive facial recognition.

ROBUST: Additional biometric layer creates a full 3-factor authentication process and eliminates SMS vulnerabilities to device-based fraud.

SCALABLE: Built on existing framework so that companies don't need new processes and users don't need new devices or applications to sign-in. Simply do what you have always done!

Sign-in made simple
